

# RESEARCH SUBSCRIPTIONS

IT professionals rely on NSS Labs research services to guide their security product decisions. Our research service includes test reports and analytical briefs that provide expert insight into security product functionality, effectiveness, performance, manageability and cost of ownership.

Get immediate access to research, test reports and analytical briefs as they are published. Each subscription is for a 12 month period and includes a one hour consultation with our security analysts.

## SUBSCRIPTION AND REPORT BENEFITS

- **Obtain unparalleled visibility into product capabilities**  
Get the facts about products before you shortlist, evaluate or make a purchase. Have informed discussions with vendors and providers.
- **Save time during the purchasing/renewal process**  
With a basis in hard data--not opinion--NSS Labs research reports help you accelerate the shortlist process through product guidance and at-a-glance graphics of key metrics.
- **Keep your IT projects on target**  
Leverage our research and analysis to keep your projects on time and on budget.
- **Save money**  
Avoid costly mistakes including buying the wrong product, failing to configure it properly, or paying too much for too little.

## SUBSCRIPTIONS INCLUDE

### Network Infrastructure and Security Coverage

Analyst coverage of network infrastructure and information security technologies, vendors and products. Network security devices include routers, switches, firewalls, NGFW, Unified Threat Management (UTM), Intrusion Prevention Systems (IPS), Secure Web Gateways, Web Application Firewalls, virtualization & cloud security, VPNs, etc.

### Endpoint Security Coverage

Endpoint coverage for servers, desktops, laptops and mobile devices includes anti-malware, browser security, host intrusion prevention, mobile device management and encryption.

### Analyst Inquiries

Get expert advice directly from our hands-on analysts in interactive inquiry sessions. Gain a better understanding of the trends, issues and factors that may impact your critical technology projects.

### Tool Kits

Get the tools behind the research so you can fine tune your own analyses. RFP templates, vendor product questionnaires, an excel version of the Security Value Map (SVM), and more.

Subscription pricing is based on the number of users for 1, 2 or 3 years, and includes access to group and individual product test reports, analysis briefs, tool kits and limited analyst inquiry time.

## Our Research

### COMPARATIVE ANALYSIS REPORTS

Use detailed comparative test data to shortlist products for further evaluation and proof-of concept testing. Compare and understand the range of security effectiveness, evasion techniques, manageability, and throughput under real-world conditions. Discover the total cost of ownership over three years, including support contracts, maintenance, and upkeep time.

### PRODUCT ANALYSIS REPORTS

Detailed product test reports are based on our standardized methodologies and offer an in-depth, stand-alone product analysis. These reports evaluate security effectiveness, performance, manageability, and stability at a deeper level than the typical group test report.

### ANALYSIS BRIEFS

Analytical briefs provide focused analyses of emerging information security trends, events, and technology issues, offering context and perspective for IT professionals.
